

COMPREHENSIVE DISASTER RECOVERY PLANS

The key to ensuring that in the event of an unforeseen disaster your business continues to function is through thorough preparation beforehand.

Our philosophy at Hedgecon is that a comprehensive DR plan should leave very little questions to be answered at the time a plan needs to be put into action. The time spent immediately following an interruption should be used to get your business back on its feet and functioning as quickly as possible – in minutes and not days. Our goal is to ensure that from the moment you believe you may experience an interruption of service the reconstruction is already beginning to take place.

- > Our comprehensive DR plans include the following to ensure that all of this takes place as easily as possible:
- > Clearly documented and defined chain of command
- > Dependency ordering of systems to bring back online including system classifications
- > Customized DR instructions and action plans for each employee and their specific roles and responsibilities within the IT department
- > Checklists of required software, patches and printed documentation to be available at any DR facility
- > Plans and instructions for the end user connectivity
- > Project plans to be put into effect as required
- > This is all put together after a thorough process of standardized interviews with key personnel from both technology and business units within the organization.
- > Having a solid DR plan in place will also assist with obtaining the most competitive insurance rates, increase corporate value and allow the board of directors or other corporate governing agencies more leverage in negotiations and enhance confidence in the stability and long term viability of the business.
